## **LAB EXAM**

### Write a Java program to

#### a. Perform inorder tree traversal

```
public class Tree {
  Node root;
   public void inorderTraversal(Node node) {
    if (node == null) {
       return;
    }
    inorderTraversal(node.left);
    System.out.print(node.data + " ");
    inorderTraversal(node.right);
  }
  public static void main(String[] args) {
    Tree tree = new Tree();
    tree.root = new Node(1);
    tree.root.left = new Node(2);
    tree.root.right = new Node(3);
    tree.root.left.left = new Node(4);
    tree.root.left.right = new Node(5);
    System.out.println("Inorder traversal of binary tree is ");
    tree.inorderTraversal(tree.root);
  }
}
class Node {
  int data;
  Node left, right;
```

Name: - Nitin Sunil More PRN: - 220960920048

```
public Node(int item) {
    data = item;
    left = right = null;
}
```

#### Output: -

```

Inorder traversal of binary tree is

4 2 5 1 3
```

# b. Implement stack using array

```
package com.main.stack;
import java.util.Scanner;
public class StackImp {
  int top;
  int maxsize = 10;
  int[] arr = new int[maxsize];
  boolean isEmpty()
  {
    return (top < 0);
  }
  StackImp()
  {
    top = -1;
```

```
Name: - Nitin Sunil More
PRN: - 220960920048
  }
  boolean push (Scanner sc)
    if(top == maxsize-1)
      System.out.println("Overflow !!");
      return false;
    }
    else
    {
      System.out.println("Enter Value");
      int val = sc.nextInt();
      top++;
      arr[top]=val;
      System.out.println("Item pushed");
      return true;
    }
  }
  boolean pop ()
    if (top == -1)
      System.out.println("Underflow !!");
      return false;
    }
    else
      top --;
      System.out.println("Item popped");
      return true;
    }
```

```
Name: - Nitin Sunil More
PRN: - 220960920048
  }
  void display ()
  {
    System.out.println("Printing stack elements .....");
    for(int i = top; i>=0;i--)
      System.out.println(arr[i]);
    }
  }
public static void main(String[] args) {
  int choice=0;
  Scanner sc = new Scanner(System.in);
  StackImp s = new StackImp();
  System.out.println("*Stack operations using array*\n");
  System.out.println("-----\n");
  while(choice != 4)
  {
    System.out.println("Chose one from the below options...\n");
    System.out.println("1.Push\n2.Pop\n3.Show\n4.Exit");
    System.out.println("\n Enter your choice \n");
    choice = sc.nextInt();
    switch(choice)
      case 1:
        s.push(sc);
        break;
      }
      case 2:
      {
```

```
Name: - Nitin Sunil More
PRN: - 220960920048
        s.pop();
        break;
      }
      case 3:
        s.display();
        break;
      }
      case 4:
        System.out.println("Exiting....");
        System.exit(0);
        break;
      }
      default:
        System.out.println("Please Enter valid choice ");
      }
    }
  }
}
}
Output: -
```

Name: - Nitin Sunil More PRN: - 220960920048
